

MARKETING WEBSITE — AUDIT & RATINGS

kclinics.co.uk Audit & Ratings

Design, SEO, brand & compliance, accessibility, conversion, functionality and navigation — assessed as the site stands, with a projected score once the corrections in this report are made.

18 June 2026 · Prepared by Claude Code · for Joe Kaul
<https://kclinics.co.uk>

Executive summary

6.3

OVERALL NOW

8.4

OVERALL AFTER FIXES

+2.1

PROJECTED UPLIFT

The public site is **technically strong and visually premium** — but it **under-sells a product that is far deeper than the website reveals**, and it carries **specific UK advertising-compliance risk** that should be treated as the priority.

What's already good: every audited page returns 200, has a unique title and meta description, exactly one H1, and JSON-LD structured data; the sitemap holds 116 URLs and `robots.txt` / `llms.txt` are in place. The brand system (K monogram + CLINICS wordmark, Fraunces/Geist, taupe-and-cream palette) is applied consistently. Booking, payments, the client portal, the Academy LMS and three live AI features all function.

What's holding it back: (1) **Navigation hides the catalogue** — the Academy (a full LMS with per-course landing pages already built), Finance/BNPL, gift vouchers, group bookings and the in-clinic AI skin kiosk are buried in the footer or invisible, so visitors never reach the strongest conversion levers. (2) **Accessibility** — an automated WCAG 2.1 AA scan flagged colour-contrast failures on every page (105 elements), a form on the Academy course page with **no input labels**, and a repeated ARIA error in the footer. (3) **Compliance** — the site **names a prescription-only medicine (“Botox”) in public marketing** (CAP 12.12), uses absolute “painless / safe” guarantees, shows **placeholder GMC/GDC numbers** for clinicians, and does **not link the privacy policy in the footer** or show the ICO registration.

The opportunity is mostly assembly, not building. Most fixes surface things that already exist (the Academy course pages, the kiosk, the finance options). The headline projection: an overall **6.3 → 8.2** once the corrections below are made, with the largest single jumps in **navigation, accessibility and compliance**.

Ratings — before & after

DIMENSION	NOW	AFTER FIXES	Δ	WHY
CLINICS				
Design & visual craft	7.0	8.5	+1.5	Premium, consistent brand. Tighten contrast on faint hero text and CTA buttons; minor spacing polish.
SEO & discoverability	7.0	8.5	+1.5	Strong foundation (titles, descriptions, JSON-LD, sitemap). Add Academy hub + internal linking; index /roadmap & /academy/funding.
Brand protection & compliance	5.0	8.0	+3.0	Real CAP/MHRA exposure: POM naming, absolute guarantees, placeholder credentials, no footer privacy link. Capped at 8.0 pending legal sign-off.
Accessibility (WCAG 2.1 AA)	5.5	8.5	+3.0	Contrast (105 nodes, partly a live-palette override), a critical unlabelled form, footer ARIA, malformed <dl>. Skip-links & alt-text already present.
Client acquisition & conversion	6.0	8.0	+2.0	Booking is excellent, but Finance/BNPL, gift, group & the AI kiosk aren't surfaced; primary gold CTAs fail contrast (3.2:1).
Functionality & reliability	8.0	8.5	+0.5	Booking, payments, portal, LMS, AI all working; no blocking console errors. A genuine strength.
Navigation & information architecture	5.5	8.5	+3.0	Owner's core flag: Academy is a flat link, key offerings are footer-only. The catalogue depth isn't

DIMENSION	NOW	AFTER FIXES	A	WHY
				reachable from the header.

Scores are 0-10. "Now" reflects the live site at audit date; "After fixes" is the projected score once the corrections in this report are implemented. Method below. kclinics.co.uk Aud

Method & principles

How this was assessed

- **Rendered crawl** — headless Chromium (Playwright) over 16 key public pages at desktop (1440px) and mobile (390px); full-page screenshots captured for each.
- **Automated accessibility** — axe-core run against WCAG 2.0/2.1 A & AA rule sets on every page; violations recorded by rule, impact and exact CSS selector.
- **Technical SEO** — extraction of title, meta description, canonical, Open Graph/Twitter, JSON-LD types, heading outline, image alt coverage, landmark roles and word count per page; `sitemap.xml`, `robots.txt`, `llms.txt` inspected directly.
- **Code cross-reference** — the live findings were checked against the source (`app/(marketing)`, `lib/treatments*.ts`, `lib/nav.ts`, the admin CMS) to separate code-driven copy from admin/DB-editable copy, so each correction is routed to the right place.
- **Heuristic & compliance review** — Nielsen heuristics, UK CAP/ASA and MHRA advertising rules for aesthetics, and the project's own brand guidelines (`docs/BRAND_GUIDELINES.md`).

Design principles applied

- **Make the catalogue reachable** — every product a visitor could buy should be one click from the header, not the footer.
- **One clear primary action per page** — a single, high-contrast CTA that meets 4.5:1.
- **Above-the-fold clarity** — lead with what you do, for whom, and the next step.
- **Accessibility is conversion** — contrast, labels and keyboard support widen the funnel; they are not a separate workstream.
- **Substantiate every claim** — medical and results claims either link to a credible source or are reworded; never name a prescription-only medicine to the public.
- **Show the proof** — clinician credentials, registration (ICO/CQC where relevant), reviews and before/after build the trust that sells aesthetics.

Dimension-by-dimension analysis

Navigation & information architecture 5.5 → 8.5

The build is far richer than the navigation admits. The fix is mostly **surfacing** what already exists.

WHAT'S HOLDING THE SCORE DOWN

- **Academy** is a single flat header link (`lib/nav.ts`) with no dropdown — yet per-course landing pages (`academy/[slug]` with course schema) and a full `/academy/funding` page already exist and sit in the sitemap.
- **Finance/BNPL** (Klarna/Clearpay, 0% options) — a major conversion lever — is footer-only.
- **Gift vouchers** and **group bookings** (seasonal revenue) are footer-only.
- The **in-clinic AI skin kiosk**, the headline differentiator, isn't marketed on the public site at all.
- `/roadmap` is orphaned (linked from nowhere, excluded from the sitemap).

CORRECTIONS THAT MOVE THE SCORE

- ✓ Add an **Academy mega-menu** (Courses by level, Funding, How it works, Apply) and a treatments mega-menu grouping the 40+ treatment pages.
- ✓ Promote **Finance**, **Gift vouchers** and **Group bookings** into the header (or a 'More' menu) — not just the footer.
- ✓ Add an **AI Skin Scan** entry that markets the kiosk experience and routes to `/ai-consultation`.
- ✓ Link `/roadmap` from the footer and add it to the sitemap; add `/academy/funding` to the sitemap.

Accessibility (WCAG 2.1 AA) 5.5 → 8.5

axe-core found a small number of **systemic** issues that repeat sitewide — so a handful of fixes clears most of the 105 contrast nodes and the ARIA/label errors.

WHAT'S HOLDING THE SCORE DOWN

- **Colour-contrast** fails on all 16 pages (105 elements). Two root causes: the live `--color-stone` is overridden to the lighter brand taupe **#91766e (3.59:1)** — a palette/admin setting, not the code default — and **primary gold CTA buttons are white-on-#a98a6d at 3.2:1**.
- **Critical:** the Academy course enquiry form has inputs (name, email, tel) with **no associated labels**.
- **Footer** payment icons use `<span aria-label="Mastercard">` with no role — an invalid-ARIA error repeated on every page.
- The homepage has a malformed `<dl>` (direct `<div>` children; `<dt>/<dd>` outside a `<dl>`).

CORRECTIONS THAT MOVE THE SCORE

- ✓ Set the live `--color-stone` back to an AA value (`#7d6259, 4.79:1`) in **admin → Brand/site palette**; darken the gold CTA to `--color-gold-deep` (or use ink text) so buttons pass 4.5:1.
- ✓ Add `<label>`s (or `aria-label`) to the Academy course form inputs — **critical**, code fix.
- ✓ Add `role="img"` to the footer payment-mark spans (code fix).
- ✓ Correct the homepage `<dl>` structure (code fix).

Brand protection & compliance 5.0 → 8.0

The brand *assets* are used correctly; the **claims** carry UK advertising risk that should be the first thing fixed.

WHAT'S HOLDING THE SCORE DOWN

- **Names a prescription-only medicine in public marketing** — “Anti-Wrinkle (Botox)” with a dedicated page and metaTitle “Botox in London” (`lib/treatments*.ts`). CAP 12.12 prohibits advertising POMs to the public.
- **Absolute guarantees** — “painless / safe / scar-free” wording on several treatment pages; indefensible under CAP.
- **Medical-condition & “detox/toxins” claims** (fungal nail, intimate health, cellulite) need clinical evidence and an MHRA device basis.
- **Clinician GMC/GDC numbers are bracketed placeholders** (`lib/team.ts`); the **privacy policy isn't linked in the footer**; the **ICO number (ZC153001) is never shown publicly**.

CORRECTIONS THAT MOVE THE SCORE

- ✓ Reword “Botox” to “anti-wrinkle injections” / “wrinkle-relaxing treatment” across titles, copy and metadata; remove brand-name promotion (code fix, **legal sign-off recommended**).
- ✓ Replace absolute guarantees with qualified, defensible wording (“designed to minimise discomfort”, “carried out by trained clinicians”).
- ✓ Add the privacy-policy link and ICO registration to the footer (code fix).
- ✓ Fill real GMC/GDC numbers (owner data) — set as a P0 build-board task until supplied.
- ✓ Stand up a **claims-governance automation** (below) so future copy edits are routed to the right owner.

SEO & discoverability 7.0 → 8.5

A genuinely strong foundation; the wins are **internal linking and indexing the Academy**, plus tightening a few descriptions.

WHAT'S HOLDING THE SCORE DOWN

- All pages have titles, descriptions and JSON-LD; sitemap (116 URLs), robots and llms.txt are present — a strong base.
- Academy course pages exist but are barely internally linked; `/academy/funding` and `/roadmap` are not in the sitemap.
- A few meta descriptions exceed ~160 characters (academy 239c, book 250c) and will truncate in SERPs.
- `/ai-consultation` is thin on indexable copy for such a strategic page.

CORRECTIONS THAT MOVE THE SCORE

- ✓ Build the Academy hub and cross-link course pages; add Course/EducationalOrganization schema where missing.
- ✓ Add `/academy/funding` and `/roadmap` to `app/sitemap.ts`.
- ✓ Trim over-long meta descriptions to ~150–160 characters.
- ✓ Expand `/ai-consultation` copy (how it works, privacy, what you get) for indexable depth.

Client acquisition & conversion **6.0** → **8.0**

The funnel mechanics are excellent; the leaks are **discoverability and CTA contrast**.

WHAT'S HOLDING THE SCORE DOWN

- Strongest levers (finance, gift, group, kiosk, Academy) aren't surfaced where intent is highest. CLINICS kclinics.co.uk Aud
- Primary gold CTA buttons fail contrast (3.2:1), reducing clarity of the next step.
- The AI kiosk reward loop (scan → personalised plan → welcome offer) is a powerful acquisition hook that web visitors never see.

CORRECTIONS THAT MOVE THE SCORE

- ✓ Surface finance/gift/group/kiosk in the header (see Navigation).
- ✓ Fix CTA contrast so the primary action is unmistakable.
- ✓ Add a homepage 'AI Skin Scan' module that teases the kiosk and drives `/ai-consultation` / booking.

Design & visual craft **7.0** → **8.5**

Premium and consistent; the deductions are small and mostly the contrast issues above plus a little above-the-fold density.

WHAT'S HOLDING THE SCORE DOWN

- Faint decorative hero text (`#ded4cc` on cream, 1.25:1) reads as broken to assistive tech and is hard to see for everyone.
- Some pages push key content below the fold on mobile.
- Otherwise the visual system (type, palette, marks, imagery) is strong and on-brand.

CORRECTIONS THAT MOVE THE SCORE

- ✓ Either strengthen the faint hero text to a legible tone or mark it decorative (`aria-hidden`) and ensure a legible headline carries the meaning.
- ✓ Audit above-the-fold on the top 5 mobile landing pages; lead with headline + primary CTA.
- ✓ Keep the existing design language — it's an asset; the work is refinement, not redesign.

Functionality & reliability **8.0** → **8.5**

A clear strength — keep it that way while fixing the above.

WHAT'S HOLDING THE SCORE DOWN

- All audited pages 200; booking, payments, portal, LMS and AI features operate; no blocking console errors observed.
- Some marketing pages use `force-dynamic`, costing cache/perf headroom (noted in the internal perf audit).

CORRECTIONS THAT MOVE THE SCORE

- ✓ Where copy is ISR-friendly, prefer revalidation over `force-dynamic` to improve TTFB.
- ✓ Regression-test the booking and payment funnels after the nav/CTA changes.

Implementation plan

Phase 1 — Compliance & accessibility (P0, this week)

- Reword POM/“Botox” naming and absolute guarantees across `lib/treatments*.ts` (with legal sign-off).
- Add footer privacy-policy link + ICO registration; add Academy course-form labels; add `role="img"` to footer payment marks; fix the homepage `<dl>`.
- Reset the live `--color-stone` palette value to AA and darken gold CTAs (admin palette + code default).
- Raise a P0 build-board task for real GMC/GDC numbers (owner-supplied data).

Phase 2 — Navigation & Academy surfacing (this sprint)

- Ship an Academy mega-menu + a treatments mega-menu (code default in `lib/nav.ts`; mirror in admin NavEditor if a DB override is active).
- Promote Finance, Gift vouchers, Group bookings and an 'AI Skin Scan' entry into the header.
- Build a richer Academy hub page that links every course + funding + how-it-works.

Phase 3 — SEO & content depth

- Add `/academy/funding` and `/roadmap` to the sitemap; cross-link course pages; trim long meta descriptions.
- Expand `/ai-consultation` copy; market the kiosk on the homepage.
- Curate the public `/roadmap` with 6–8 shipped consumer wins for 'coming soon'.

Phase 4 — Governance automation (item 6)

- Add a claims-governance check: flag risky wording (POM names, absolute guarantees, unsourced statistics) and route to admin to edit (Website tab) where copy is DB-driven, or open a P0 build-board task for Claude where it's code-driven.
- Re-run the axe + claims scan in CI so regressions are caught before deploy.

Appendix — what's under the hood (why this site deserves investment)

The marketing site is the shop window for an unusually deep platform: **~110,000 lines** of typed application code, **128 data models, 225 API routes, 98 admin pages** and **51 marketing pages**, across nine live customer-facing surfaces — booking, client portal, a full admin CRM, a native Academy LMS, an AI skin-analysis kiosk, e-commerce + POS, and a partly-shipped multi-tenant SaaS seam (ClinicOS).

Raw audit data (per-page SEO + axe results) is in `qa-output/site-audit/audit.json`; screenshots in `qa-output/site-audit/shots/`. Full product inventory, roadmap and valuation are in `docs/audit-2026-06/`.

- 16 pages crawled · 0 HTTP errors · 116 sitemap URLs
- Every page: unique title + description, single H1, JSON-LD present
- axe-core: colour-contrast (105 nodes), 1 critical unlabelled form, sitewide footer ARIA, 1 malformed list
- Strengths to protect: brand system, structured data, first-party booking, the AI differentiators
