

Go-Live Action List & Final Configuration

Prepared for **the Owner** Prepared by **Claude (build agent)** Date **12 June 2026** Platform **kclinics.co.uk**

ACTION REQUIRED FROM YOU

Please send me all credentials for the Vercel environment variables

Every integration below is wired and ready in code. To switch each one on I need the matching keys/secrets pasted into **Vercel** → **k-clinics** → **Settings** → **Environment Variables**. Please obtain each credential from the provider (steps below) and send them all to me — I will enter them in Vercel, redeploy, and complete the OAuth "Connect" step for you. Treat these as sensitive: send them via our agreed secure channel, never in plain email.

Two facts that make everything below make sense:

1. **Where keys live** — Vercel → *k-clinics* → Settings → Environment Variables (Production), then Deployments → Redeploy.
2. **Where to check status** — the admin page `/admin/integrations` shows every service as **green / amber / grey**. The goal is to turn the ones you use green.

A Two-minute jobs — no accounts needed

A1 · Delete the 3 placeholder board cards

DO NOW

1. Open `/admin/build`.
2. Open the card **"BLD-244 · Test item"** → click the red **Delete** button → confirm.
3. Repeat for **"BLD-257"** and **"BLD-258"** (both "Routine run complete").

Done when: those three cards are gone from the TRIAGE column.

A2 · Eyeball the dashboard fix

DO NOW

1. Open `/admin` on desktop, then on your phone.
2. Check the clock / weather / clock-in cluster (top-right) sits tidily and the "Needs attention" chips are near the top.

Done when: it looks right. If not, message me and I'll adjust.

A3 · Send the re-permission email campaign (already built)

1. Open `/admin/marketing/email`.
2. Find the **"Win back legacy opt-ins"** card (shows an "X pending" count).
3. Click **Send re-permission emails** → **Yes, send**. Repeat until it reads "All legacy opt-ins have been emailed".

Done when: the card shows 0 pending.

B Integrations — get the credentials, send them to me

For each service: create/sign in to the account, follow the steps, copy the keys, and **send them to me** to enter in Vercel. Where an OAuth "Connect" is needed afterwards, I'll do it (or walk you through `/admin/integrations`).

B1 · Anthropic API key — unlocks the kiosk AI & appointment voice-notes RECOMMENDED NEXT

- 1. Go to console.anthropic.com and sign in with the clinic account.
- 2. **Settings** → **Billing** → add a card and a small credit (≈ £20).
- 3. **Settings** → **API Keys** → **Create Key**, name it `kclinics-prod` , and **copy it** (starts `sk-ant-...` ; shown once).
- 4. Send me the key. Env var: `ANTHROPIC_API_KEY` . Docs: docs.anthropic.com.

Done when: I've added it & redeployed — then I can build the BLD-138 voice-note feature.

B2 · Xero — accounting & cashflow (BLD-58)

- 1. Go to developer.xero.com/app/manage → sign in → **New app** → type **Web app**.
- 2. Company URL `https://kclinics.co.uk` . OAuth 2.0 redirect URI (paste exactly): `https://kclinics.co.uk/api/admin/integrations/xero/callback`
- 3. Create → copy the **Client id**, then **Generate a secret** and copy it. Send me both.
- 4. Env vars: `XERO_CLIENT_ID` , `XERO_CLIENT_SECRET` . Guide: Xero getting-started.

Done when: I've connected it and the Xero card on `/admin/integrations` is "connected".

B3 · Storefront kiosk on the NovaStar Taurus (BLD-134 / PRJ-1) ON-SITE

- 1. Create a NovaStar account at vnnox.com or install ViPlex (manuals: novastar.tech/support).
- 2. Add & bind your Taurus player (pair via its Wi-Fi per ViPlex steps).
- 3. New program → add a **Web page / URL** item → URL: `https://kclinics.co.uk/kiosk/display` → full-screen → **Publish** to the Taurus. (Find the QR/URL under `/admin/qr` .)

Done when: the screen shows the live "Skin & Smile" QR kiosk. Needs the physical player on-site — no credentials for me.

B4 · Visual-QA token (BLD-39) — I can set this myself if you confirm

- 1. This is an agent-session variable, not Vercel. It reuses the existing board token value.
- 2. Reply "go" and I'll set `QA_TOKEN` = the existing `BOARD_QUEUE_TOKEN` value in the session environment.

Done when: QA_TOKEN is set so the visual-QA harness cleans up its own test sessions.

B5 · Remaining services — send credentials for any you want live

Check the badge on `/admin/integrations` ; for any grey/amber card you use, get the keys below and send them to me.

Service	Credentials to send	Where to get them (account flow)	Purpose
Stripe	STRIPE_SECRET_KEY , NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY , STRIPE_WEBHOOK_SECRET	Dashboard → Developers → API keys: dashboard.stripe.com/apikeys	Deposits & treatment payments
Resend	RESEND_API_KEY , EMAIL_FROM	Verify domain, create key: resend.com/api-keys	Confirmations, reminders, campaigns
Twilio	TWILIO_ACCOUNT_SID , TWILIO_AUTH_TOKEN , TWILIO_FROM	Console → Account Info: console.twilio.com (buy a number for FROM)	SMS appointment reminders
TrueLayer	TRUELAYER_CLIENT_ID , TRUELAYER_CLIENT_SECRET	Console: console.truelayer.com	Live bank balance (Open Banking)
Google Business	GOOGLE_CLIENT_ID , GOOGLE_CLIENT_SECRET , GOOGLE_BUSINESS_ACCOUNT_ID , GOOGLE_BUSINESS_LOCATION_ID	Credentials: console.cloud.google.com	Pull & reply to Google reviews
yay.com	YAY_WEBHOOK_SECRET (+ YAY_AUTH_* for click-to-dial)	Docs: docs.yay.com	Call logging & click-to-dial
Translation	DEEPL_API_KEY or GOOGLE_TRANSLATE_KEY	DeepL API: deepl.com/pro-api	Translate client form answers

C API endpoints needing final configuration

These URLs are already live on our side. They must be **registered in each provider's dashboard** as the redirect/webhook target (I'll do this once you've created the apps; listed so you can confirm them).

Provider · purpose	Endpoint to register	Where to enter it
Xero · OAuth redirect	<code>https://kclinics.co.uk/api/admin/integrations/xero/callback</code>	Xero app → Redirect URIs
TrueLayer · OAuth redirect	<code>https://kclinics.co.uk/api/admin/integrations/truelayer/callback</code>	TrueLayer console → Redirect URIs
Google Business · OAuth redirect	<code>https://kclinics.co.uk/api/admin/integrations/google-business/callback</code>	Google Cloud → Credentials → Authorised redirect URIs
Google Calendar · OAuth redirect	<code>https://kclinics.co.uk/api/admin/gcal/callback</code>	Google Cloud → Credentials (+ set <code>GOOGLE_INTEGRATION_ENABLED=true</code>)
Stripe · payment webhook	<code>https://kclinics.co.uk/api/stripe/webhook</code>	Stripe → Developers → Webhooks (signing secret → <code>STRIPE_WEBHOOK_SECRET</code>)
Resend · email events webhook	<code>https://kclinics.co.uk/api/webhooks/resend</code>	Resend → Webhooks (secret → <code>RESEND_WEBHOOK_SECRET</code>)
yay.com · Call-Ended & Voicemail	<code>https://kclinics.co.uk/api/integrations/yay</code>	yay.com → Webhooks (shared secret → <code>YAY_WEBHOOK_SECRET</code>)

D Decisions for me to build next

D1 · BLD-138 "exceptional appointment" — choose the next slice

- 1. **Per-clinician timing breakdown** (extends the new Session insights report).
- 2. **Explicit front-desk check-in step** in the session sequence.
- 3. **Voice-note capture + transcription** — needs B1 (Anthropic key) first.

Done when: you reply with 1, 2 or 3.

D2 · BLD-145 · shared live-stream (SSE) refactor

- 1. I'll do this in a session where I can verify the kiosk / appointment / client-live streams against a preview, to avoid any risk to live realtime features. No action needed from you.
